History and description of the remains

In the 1890s, human remains representing, at minimum, two individuals were removed from the Grand Gulch area of San Juan County, UT. The human remains were excavated during the Hyde Exploring Expedition, which was sponsored by the American Museum of Natural History (AMNH) in New York City. In 1902, Professor F. W. Putnam, Curator of Anthropology (then of AMNH) and supervisor of the Expedition, along with his former associate, Dr. Aleš Hrdlička (then of AMNH and later of the United States National Museum [Smithsonian Arts and Industries Building]), gave the human remains to Dr. Harris Hawthorne Wilder, Professor of Zoology at Smith College (1892-1928). On January 16, 1902, AMNH sent the human remains to Smith College to become part of the Wilder Collection. During the late 1970s, Smith College disbanded the Wilder Collection and transferred some of the human remains to the University of Massachusetts Amherst (UMass), including the individuals from Grand Gulch. UMass

accessioned some of these human remains in 1986-1987; others were never accessioned.

The human remains belong to an adult male and an adult female. The male's approximate age was 45 and the female's approximate age was 60. Dr. Wilder created a plastilina (also known as plasticine) bust (146) and a cast made from the bust. Dr. Wilder utilized the cranium and post cranial elements of the female to make the bust. The cranium, neck, and shoulders were never cataloged, and were reported to have been encased in the bust. No known individuals were identified. No associated funerary objects are present.
